

Sustaining Integration of Services Beyond Donor Funding. Tanzania Cervical Cancer project experience

Prudence Masako, RH CoP, PSI Tanzania

Quality Services provision

Achievements

- Standardize training and supportive supervision yield competent providers
- Single visit Approach (SVA) resulted to higher preventive treatment rates
- Despite cessation of financial assistance to 39 Social Franchise facilities, 22 facilities continue to offer quality services with 94% treatment rates

Challenges...

The integration of cervical cancer screening services and preventive treatment has increased clients, income and coverage beyond this facility as we provide outreach services to our sister facility in the other region, Dr. Ndauzi, Huduma Health Centre, Owner.

- Limited access to LEEP services
- Sustainability beyond current funding to some facilities

THANK YOU!
